

Test Metrics for www.iuliustown.ro

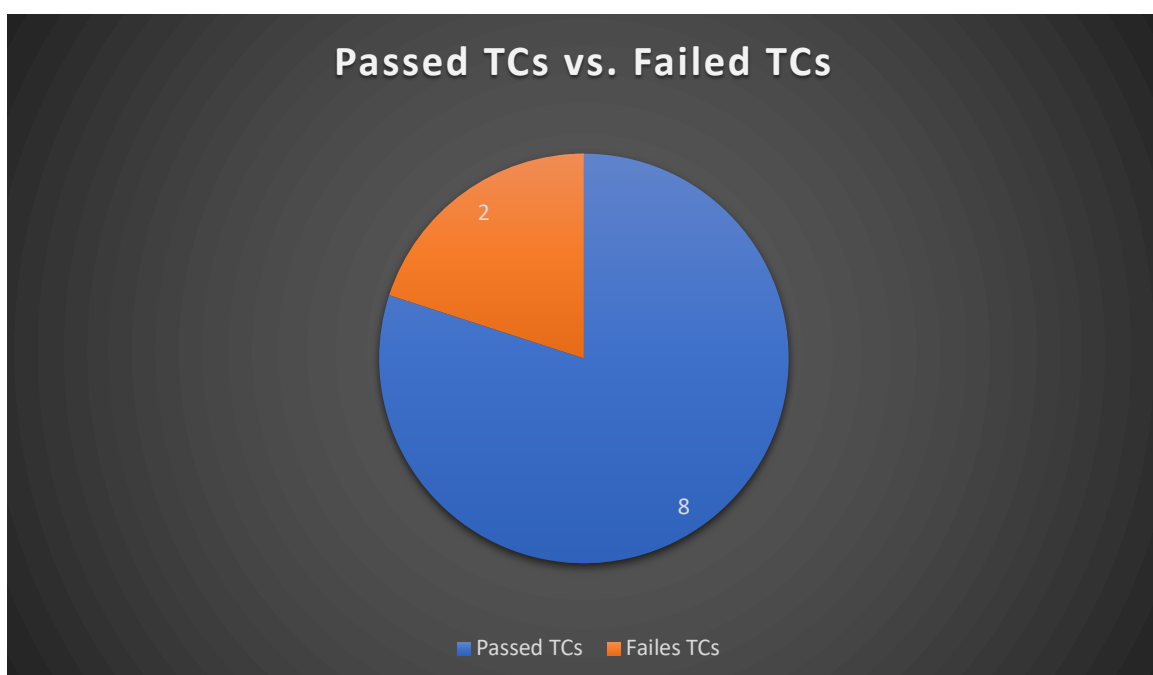

Test Metrics are used to provide insight on the quality and progress of the testing process. Test Metrics are defined to give an answer to the following questions regarding testing and testing related processes:

- **How much effort is spent on testing as a percentage of the total effort on project or maintenance?**

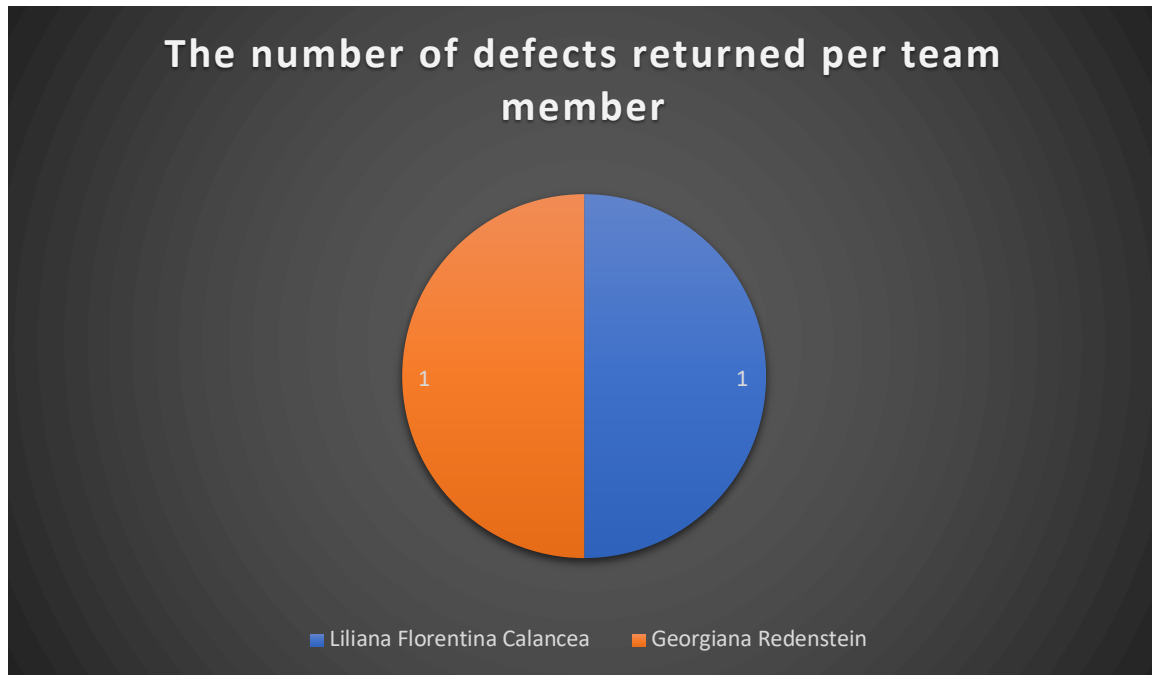

In order to improve planning and estimating of testing, it is recommended to collect the data of all effort in order to calculate a percentage of the total project or maintenance activities costs.

- **Passed TCs vs. Failed TCs**

- The number of defects returned per team member.

- **Roles and Responsibilities**

The measurements apply to both external and internal service providers. The metrics below are proposal and shall be revised during their implementation and, if necessary, incorporated as part of project or product maintenance measurements.

Responsibility/Ownership	Name
[Test Manager]	Liliana Florentina Calancea
[Test Lead]	Liliana Florentina Calancea
[Development Company Test Manager & System Test Lead]	Corina Maxim
